## **Active Weather Warnings, Watches and Advisories by County:**

- <http://www.wrh.noaa.gov/hazardSummary/?state=ca&bycounty=1>

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

A weather system continuing to move SE out of California will bring lingering cloudiness over the eastern and southern portions of the Northern California region today. A few showers and an afternoon thunderstorm are possible today from Lake Tahoe southward along the Sierra. Temperatures will be about 10 degrees warmer today, with warmest inland valleys around 80. Areas of gusty northerly winds in place through tonight, peak gusts mostly 25-30 mph in the usual windiest north wind locations, then much lighter winds rest of week. Drying trend, warmest inland areas in the mid and upper 80s rest of this week under high pressure prevailing. There is a small chance of isolated mountain showers in the north this weekend as a weak weather system moves through the region; only slightly cooler. Warmest areas in the lower 90s possible early next week behind the weekend weather system.

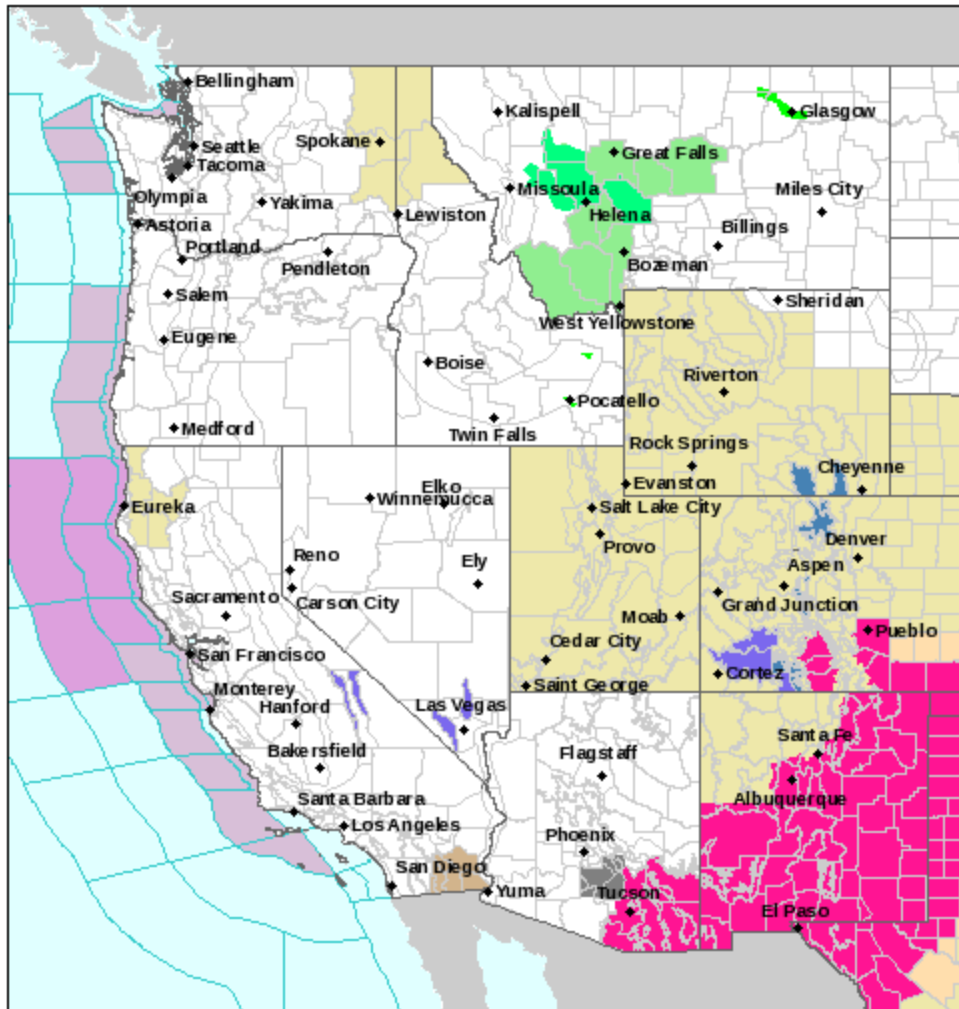

## **SOUTHERN CALIFORNIA**

An area of low pressure currently over Southern California will bring scattered showers and isolated thunderstorms mainly to Southern California and the Sierra through Wednesday afternoon. However, a few showers and an isolated thunderstorm will be possible across the rest of Central California this afternoon. Most locations will receive less than a half inch of rainfall with this low pressure area. The snow level will be around 7,000 feet. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the wind prone mountain and desert locations through this evening. Temperatures will continue to be well below normal through Wednesday, with upper 40s and 50s across the mountains and 60s to low 70s in the valleys. Significant warming and drying will take place Thursday through Saturday as a ridge of high pressure builds into California from the Pacific Ocean. Temperatures will be 10 to 15 degrees above normal and minimum humidity will be mainly in the teens Friday and Saturday. Winds will be light Thursday through Saturday. The ridge of high pressure will weaken as a trough moves inland into the Pacific Northwest bringing a slow cooling trend as well as a gradual increase in humidity Sunday through early next week.
